Abstract

Objective: This questionnaire survey was performed to clarify the current status, and problems with, training of board certified infection control pharmacy specialists in the Sapporo area and to evaluate its future direction.

Methods: The subjects were 110 participants in the Seminar for board certified infection control pharmacy specialists sponsored by the Sapporo Association of Hospital Pharmacists. The questionnaire consisted of 6 questions regarding the respondents' background and 7 questions regarding board certified infection control pharmacy specialists.

医薬品情報学 Vol.10, No.1 (2008)

Results: The response rate of the questionnaire was 62.7%. Analysis of the responses revealed some problems with the seminar.

Conclusions: Future seminars should be organized in consideration of the problems revealed by this survey. In addition, support to utilize drug information on infection control in training of board certified infection control pharmacy specialists are also considered important.

Key word: Questionnaire survey, Board certified infection control pharmacy specialist, Infection control
